DESCRIPTORS: *Films, *Ferromagnetic materials, *Inductance, Coils, Oscillators, Magnetism, Magnetic properties, Electrical conductance,

The dependence of the inductance of a coil with a magnetizable film on the premagnetization of the film is calculated. An equivalent circuit is set up for the coil, consisting of a dissipative parallel oscillating circuit and an inductance connected in series. The values (resonance frequency, quality, capacity, conductivity and inductance) of the parallel oscillating circuit are functions of the premagnetization. They are repre-

The thermal stability of commercial straight-run fuels of kerosene type is mainly determined through character and quantity of the non-hydrocarbon, resinous compounds contained in them and representing the basic source of high-temperature deposits. The hydrocarbon part of different commercial fuels has practically an equal high temperature stability. The dominant influence of non-hydrocarbon resinous components on the thermal stability is observed also in
